

- Transport of small molecules
- Glycerophospholipid biosynthesis
- epithelial cell differentiation
- chordate embryonic development
- tube morphogenesis
- carboxylic acid biosynthetic process
- Dissolution of Fibrin Clot
- Fluid shear stress and atherosclerosis
- NABA ECM REGULATORS
- reproductive structure development
- IL-18 signaling pathway
- negative regulation of endopeptidase activity
- response to toxic substance
- urogenital system development
- cellular modified amino acid metabolic process
- ion homeostasis
- anion transport
- Pathways in cancer
- Prostaglandin synthesis and regulation
- cellular response to abiotic stimulus
